Art Rejections:

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramsey, U.S. pat. Appl. Pub. No. 2002/0168001.

Per claims 1 and 3-7, Ramsey discloses a network analyzing apparatus which analyzes network properties of a device under test (i.e., distribution network) to which modulated signals are applied, comprising:

- a) a demodulator which demodulates data contained in output signals from said device under test (see par. 40);
- b) a reference-signal generator which generates said modulated signals based on data (e.g., frequency response, phase angle) that has been demodulated by said demodulator and setting data supplied in advance and outputs said modulated signals as reference signals (see par. 35-36);

Art Unit: 2154

c) an analyzer which analyzes said network properties, i.e., noise, of said device under test by comparing or referencing the output signals of said device under test and said reference signals (e.g., frequency response, phase angle) (see par. 43-45, 49-50 and 53-54).

Ramsey does not explicitly teach testing a specific network device. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize Ramsey's invention to test any network components and/or network devices (e.g., transmission equipment).

Per claim 2, Ramsey teaches performing Fourier transform to obtain the frequency response from the output signal (see par. 49).

Claims 8-14 are rejected for the same rationale set forth for claims 1-7.

Conclusion:
